DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Caine et al. (United States Patent 6,735,302), hereinafter referenced as Caine.

Regarding **claim 1**, Caine discloses a method and apparatus for DC feed control. In addition, Caine discloses a method for DC level control for a line card, comprising: receiving a digital input signal; determining a first DC component value of the digital input signal at a first preselected time; determining a second DC component value of the digital input signal at a second preselected time; determining a difference between the first DC component value and the second DC component value; and providing the first DC component value to a digital-to-analog converter in response to determining that the difference is less than a first preselected value, as disclosed at column 2, lines 46-57; column 9, line 1 through column 11, line 19 and exhibited in figure 7.

Regarding **claim 2**, Caine discloses everything claimed as applied above (see claim 1), in addition Caine discloses subtracting the difference between the first DC component value and the second DC component value from the digital input signal, as

Art Unit: 2646

disclosed at column 2, lines 46-57; column 9, line 1 through column 11, line 19 and exhibited in figure 7.

Regarding **claim 3**, Caine discloses everything claimed as applied above (see claim 1), in addition Caine discloses providing the second DC component value to a digital-to-analog converter in response to determining that the difference is greater than the first preselected value, as disclosed at column 2, lines 46-57; column 9, line 1 through column 11, line 19 and exhibited in figure 7.

Regarding **claim 4**, Caine discloses everything claimed as applied above (see claim 1), in addition Caine discloses wherein determining the second DC component value of the digital input signal at a second preselected time includes determining a value proportional to the DC component of a signal on the subscriber, as disclosed column 2, lines 46-57; column 9, line 1 through column 11, line 19 and exhibited in figure 7.

Regarding **claim 5**, Caine discloses everything claimed as applied above (see claim 1), in addition Caine discloses wherein the digital input signal includes voice and data components, as disclosed at column 2, lines 46-57; column 9, line 1 through column 11, line 19 and exhibited in figure 7.

Regarding **claim 6**, Caine discloses everything claimed as applied above (see claim 1), in addition Caine discloses a line card including an analog-to-digital converter, wherein the first preselected value is in a range of 1/100th to 1/10th of full scale voltage of the analog-to-digital converter, as disclosed column 2, lines 46-57; column 9, line 1 through column 11, line 19 and exhibited in figure 7.

Art Unit: 2646

Regarding **claims 7-20**, they are variations of method claims 1-6, thus they are interpreted and thus rejected for the reasons set forth above in the rejection of claims 1-6.

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are most in view of the new ground(s) of rejection.

Citation of Pertinent Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Betty et al., (United States Patent 6,922,470), discloses a hybrid dc-feed controller for a SLIC.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jefferey F. Harold whose telephone number is 571-272-7519. The examiner can normally be reached on Monday - Friday 9 am - 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sinh H. Tran can be reached on 571-272-7564. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
